

ELEA INTERNET CONNECT

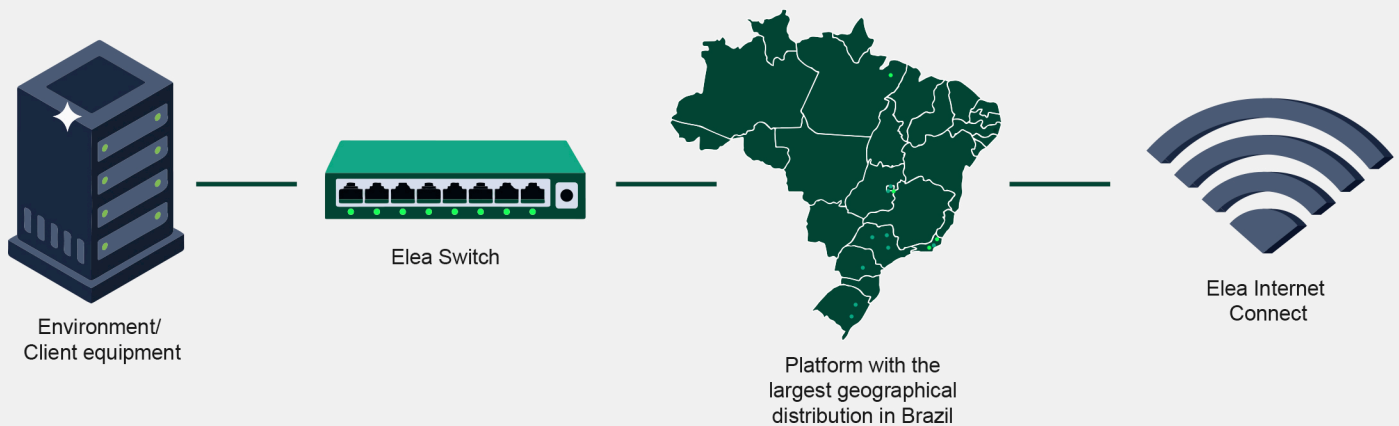

Elea Internet Connect is Elea Data Centers' dedicated Internet access service. It provides an IP /31 block, which consists of two usable IP addresses for point-to-point connectivity.

The service can be configured as a single connection or with redundancy.

The available speeds for this service are: 50Mbps, 100Mbps, 200Mbps, 300Mbps, 500Mbps, 1Gbps, 2Gbps, 5Gbps, 10Gbps.

Note: Higher speeds are available through custom projects.

TOPOLOGY

Benefits

Reliability and Performance

Dedicated Internet provides an exclusive connection with no shared bandwidth, ensuring consistently high performance. The connection features symmetric speeds (download = upload), which are ideal for operations such as video conferencing, large data transfers, and online servers.

Remote Access

A static IP address simplifies remote access to servers, surveillance systems, IoT devices, and other critical applications, enabling hosting services such as email, FTP, and VPNs.

Security

The use of static IP addresses enhances traffic monitoring and management, allowing for the implementation of specific security policies.

About Elea Data Center

Elea Data Centers is Brazil's most geographically distributed sustainable data center platform. We are powered by 100% renewable energy. Learn more at www.eleadatacenters.com.
